

MOBILE VEHICLE BARRIERS FOR VEHICLE ATTACK PROTECTION

Robust, modular protection systems – rapidly deployable and highly flexible, ideal for events, city centres, and critical infrastructure. **Made in Germany.**

BLOCKSTAHL FSB E600

Fast and flexible deployment

Designed for events with high visitor volumes and the protection of critical infrastructure. The FSB E600 can be quickly transported and positioned by a single operator using a standard pallet truck, ensuring efficient deployment whenever required.

Certification

Our vehicle barriers are certified to the highest testing standards, including ISO 22343-1:2023 and DIN SPEC 91414-1 / N2G for 7.5-ton trucks at 50 km/h. In addition, our systems are patented and licensed.

Security concept with added value

BLOCKSTAHL offers certified protection against vehicle attacks while providing a cost-effective overall concept: Each barrier is equipped with a double-sided advertising surface that can be used for sponsorship purposes. This helps significantly reduce investment costs for cities and municipalities.

Product information

Comprehensive information about our systems is available on our website.
